

ADARSH R SHENOY

Chaithanya Majoor Kaup, 574106 | adarshrshenoy1@gmail.com | [Portfolio](#) | [Github](#) | [LinkedIn](#)

ABOUT ME

Robotics & AI Engineer with **4+ deployed** ML solutions across **healthcare, aviation**, and retail. Specialize in building full-stack **AI pipelines** and **deploying real-world intelligent systems**. Currently developing **CerebAI** - a CNN-based stroke detection tool targeting **<10s diagnosis** support.

SKILLS AND ABILITIES

Programming:

Python | Java | JavaScript | MySQL

Machine Learning & AI:

NumPy | Pandas | Matplotlib | Scikit-learn | PyTorch | TensorFlow | Deep Learning | Neural Networks | NLP | OOP | OpenCV

Web Development:

HTML | CSS | PHP (basic)

Tools & Platforms:

Linux | Git | Jupyter Notebook | JSON | Postman | Streamlit

Languages:

English | Hindi | German

EXPERIENCE

Gladwell Academy India Pvt. Ltd. – Bangalore, India

12.24-04.25

AI/ML Intern

- Participated in a research-focused internship program exploring optimization-based AI use-cases under mentorship.
- Independently developed a Bangalore house price prediction ML model and showcased it as a proof-of-concept solution in the final project review.
- Contributed to knowledge-sharing sessions on improving model evaluation and deployment readiness.

EDUCATION

NMAM Institute of Technology

2022-2026

- B.Tech in Robotics & Artificial Intelligence
- CGPA: **8.68/10**
- Specialization: Artificial Intelligence

PROJECTS

CerebAI (Current project)

An AI-based **stroke detection system** using **convolutional neural networks** to assist in early **diagnosis** and targeting **$\geq 92\%$ accuracy** and **$< 10s$ diagnosis support** on **CT/MRI scans**.

LunarisAI - [Link](#)

A **menstrual cycle prediction system** using machine learning to estimate the **next period date** based on **user data**. Built with Random Forest Regressor and deployed via **Streamlit**. Adapts to inputs like stress, PCOS, and birth control to provide **personalized predictions**.

House price prediction system - [Link](#)

Developed a **machine learning model** to predict house prices in Bangalore. Achieved **83–86% accuracy**. Built to **assist small-scale real estate businesses** with **property valuation**.

Flight Customer Satisfaction System - [Link](#)

Built a **logistic regression model** to predict customer satisfaction based on **post-flight feedback**. Analysed factors such as service quality, seat comfort, and overall experience to classify users as **satisfied or dissatisfied**. Achieved **76–80% accuracy**.

Direct kinematics for robots - [Link](#)

A **mathematical tool** for computing the direct **kinematics of robotic arms**. Helps users determine the robot's **position** and **orientation** within a 3D space.

AI-NPC Interaction Engine - [Link](#)

A modular Python **engine simulating** intelligent **NPC interactions** using OOP and **ML**. Includes intent classification, **emotion-aware responses**, and turn-based mechanics.

Bookstore website - [Link](#)

A **full-stack development project** (in progress). Aims to create a **functional** online **bookstore** with modern user-facing and backend features.
